### How we do our products 🔥

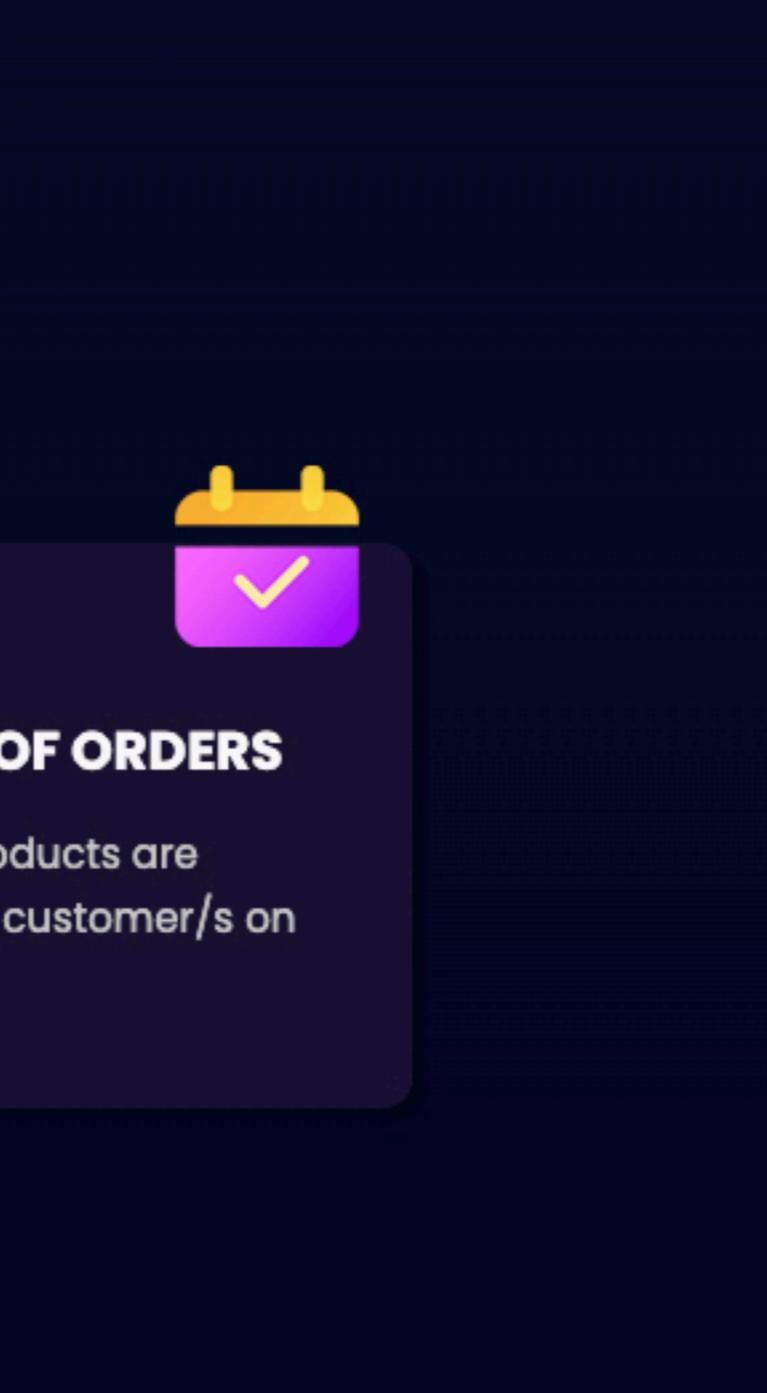

#### Design Process

It all starts with the creation of the layout of the design which is put into a specific pattern depending on the type of product ordered by the customer/s (e.g. jersey, shirt, poloshirt, etc.). Once the layout of the design is approved, then designer will then start to create the parts of the order based on the details and quantity given by the customer/s.

#### The Printing Process

Files of the layout will then be forwarded to the printing department. Those will be printed using a sublimation printer. This sublimation printer uses a sublimation paper where all the designs are printed. The sublimation paper with all the printed designs will then undergo the heat transfer process. It is where the sublimation paper is aligned with a fabric, rolled down in the heat transfer machine. As a result, the fabric is dyed completely with design.

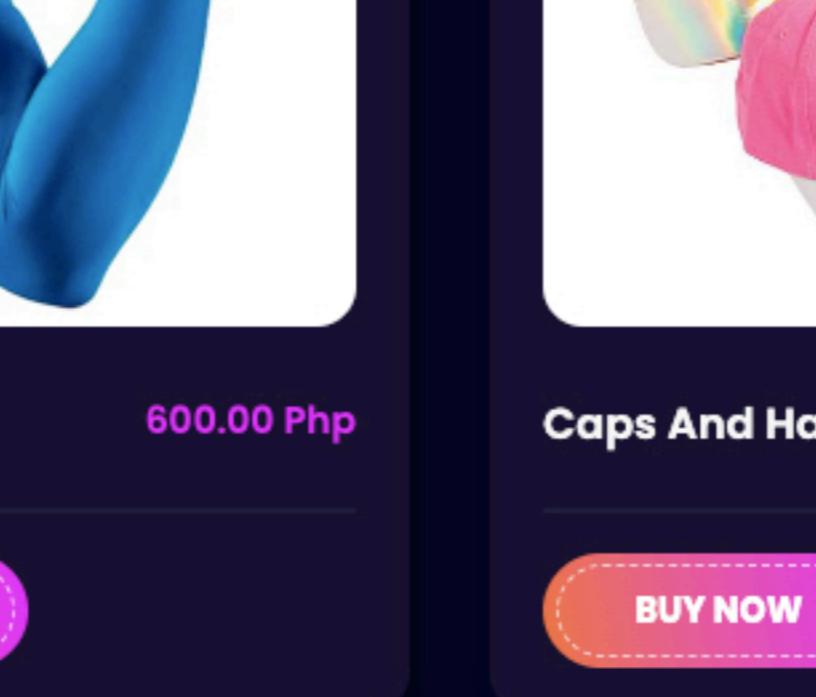

#### THE CUTTING AND SEWING PROCESS

The dyed fabrics undergo into the cutting process. All the cut parts are then distributed to start the sewing process. In the sewing process, each parts of the fabric are sewn together to form into the actual product (e.g. jersey, shirt, poloshirt, etc.).

#### THE QUALITY CHECKING AND PACKAGING PROCESS

The actual finished products undergo a quality control process where in the products are thoroughly check and made sure it follows the standard and ensure the quality of the product. After the quality control process, the finished products are then packed individually and ready for releasing.

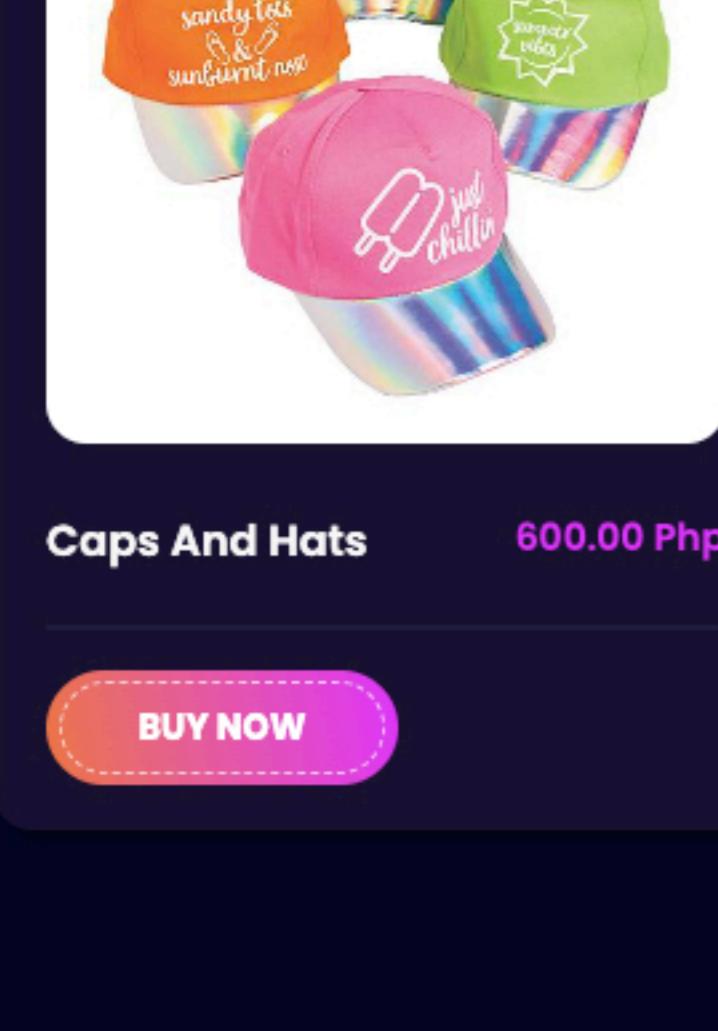

#### GO STEP 5 RELEASED OF ORDERS

The finished products are released to the customer/s on time.
